When to use the different k-factor types

k-factor type: B (Bend 90°)

k-factor type: D (Duct)

k-factor type: T (T-piece)

k-factor type: D (Duct)

Explanations

Measurement of air flow

$$q = k \cdot \sqrt{\Delta p_m} \quad \Delta p_m = \left(\frac{q}{k} \right)^2$$

where

q	is	air flow	[l/s]
Δp_m	is	measuring pressure difference	[Pa]
k	is	correction factor, see table	[-]

Tables

a	is	setting of valve disc or cone	[mm]
n	is	setting of valve disc or cone	[number of opening turns]
D	is	valve mounted in a duct	
B	is	valve mounted in a bend 90°	
T	is	valve mounted in a T-piece

Most of us spend the majority of our time indoors. Indoor climate is crucial to how we feel, how productive we are and if we stay healthy.

We at Lindab have therefore made it our most important objective to contribute to an indoor climate that improves people's lives. We do this by developing energy-efficient ventilation solutions and durable building products. We also aim to contribute to a better climate for our planet by working in a way that is sustainable for both people and the environment.
